ESA Wig and
Turban service

General care

- Gently brush your wig to remove tangles. Use a metal brush only
- Never use heat to style your wig, such as hot rollers, hair dryer or straightener. This will make the fibres frizz and be damaged
- Do not trim or cut your wig
- Hairspray, gel or styling mousse can be used, if needed

Washing and drying

- Wash the wig every 15 to 20 wears
- Mix one capful of mild shampoo, wool wash or baby shampoo in half a basin of cold water
- Gently hand wash your wig
- Rinse your wig thoroughly in cold water. If soap residue is left, your wig will be dull
- Hair conditioner is not necessary, however, adding eucalyptus oil in the final rinse of water is an excellent conditioner
- Place your wig in a folded towel and press with hands to remove excess water. Do not twist or wring
- After washing your wig and removing excess moisture, brush your wig gently into its style before drying
- Allow your wig to dry completely. It is best if your wig is placed over a vase or bottle. Putting your wig on a stand while it is wet will stretch it. To dry completely, leave overnight

Storing your wig

- When not wearing your wig, you can place it on a wig stand or over a vase or bottle
- Be mindful of storing wigs away from pets
- You can store your wig in a box when you are not wearing it, but make sure your wig is completely dry before storing
- Placing your wig in a cupboard will reduce the amount of dust that may collect on it when it is not being worn
